

FRESHNESS & ENERGY

This new signature offering is thoroughly modern approach to this ancient craft. Focusing on freshness and fruit intensity enables the purity and precision to flow seamlessly through aroma, mid palate and finish.

The barrels in the PRIME range are particularly suitable for red wines.

The PRIME toasting process preserves the natural energy of the wines, while imparting elegant, understated oak characters.

By enabling optimal development of their red fruit aromas, the wines matured in the PRIME barrels stand out for their freshness and beautiful balance.

## **OUR SELECTION** OF WOOD IN 27 MM

Tonnellerie de Mercurey is committed to long ageing of oak staves, with maturation periods of 24 to 36 months for all selected wood. The seasoning process takes place in our open air drying park in the Forest of Othe in Southern Champagne where our stave mill is located.

## **OUR TRADITIONAL** ASSEMBLAGE \_\_\_\_\_ 27 MM

#### FINE GRAIN ASSEMBLAGE TWO YEARS

These barrels are made of wood selected from at least three different forests, which has been dried for 24 months in our open air drying park.

This blend is mainly composed of fine grain wood grown using the historic "coppice with standards" forest management system (also known as taillis sous futaie or TSF), supplemented with very fine grain wood from the "coppice forest being converted into high forest" (TSF en conversion), and some staves with grains larger than 3 mm. Grain > 3 mm: 4 staves

Fine grain: (3-2 mm) 18 to 20 staves Very fine grain (2-1.5 mm): 8 to 10 staves.

### **VERY FINE GRAIN** ASSEMBLAGE THREE YEARS

These barrels are made of wood selected from at least three different forests, which has been dried for 36 months in our open air drying park.

This blend is made up of fine grain, very fine grain and a single stave of grain greater than 3 mm. Sourced from futaie (high forests) and TSF being converted into high forest. These barrels use the same concept as the 2-Year Fine Grain Selection, but with superior criteria in terms of grain and colour.

Grain > 3 mm: 1 stave maximum Fine grain (3-2 mm): 10 staves Very fine grain (2-1.5 mm): 20 staves

## **OUR TERROIRS** ASSEMBLAGE \_\_\_\_\_ 27 MM

### PIERRE TERROIR 30 MONTHS

The oak comes exclusively from the TSF forests located on the hilltops of northern Burgundy; from the dry and rocky soils of the Barrois or Lorraine plateaus.

The trees are low in height and have a wild, informal growth pattern. As a result, Pierre Terroir oak has an intrinsic heterogeneity that naturally complements our assemblage philosophy. The variation of grain within each stave is visible on these barrels.

Pierre Terroir wood is dried for 30 months in our open air drying park.

## HAUTE FUTAIE 30 MONTHS Loamy-clay

This is a selection of wood from haute futaie forests (high stands forests), which grow in loamy-clay soils.

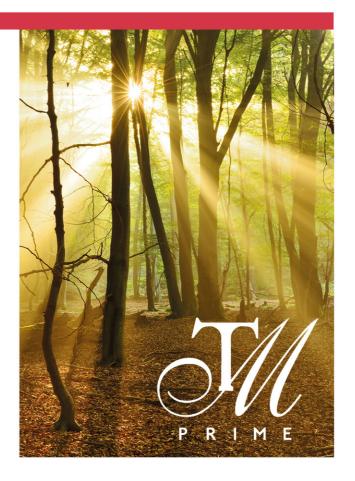

Grown under haute futaie forestry management, trees are planted in high density (100,000 trees/hectare) and are progressively harvested during their growth to obtain only 150 mature trees, almost two centuries later.

The high level of competition for light in these forests forces the trees to grow tall, producing extra-fine grains with a specific aromatic profile. This wood is dried in the open air for 30 months.

#### PRESTIGE 30 MONTHS Sandy-clay

This specific blend is composed only of very fine grains, coming from our best selection of haute futaie oaks grown on sandy-clay soils. It is an exclusive selection, with a unique light pink colour and a delicate scent reminiscent of cedar. This wood is dried for 30 months in our open air drying park. This high quality wood is sourced from small state forests where sand dominates the composition of the soil, such as Fontainebleau, Senonches, Réno-Valdieu, Bellême, Russy, Boulogne, Beaulieu, La Haie Renaut, Tronçais, Bercé and Retz.

## **OUR SELECTION** OF WOOD IN 22 MM

These barrels are made of wood selected from at least three different forests, which has been dried for 24 months.

# **OUR BORDEAUX** ASSEMBLAGE \_\_\_\_\_ 22 MM

#### 24 MONTHS VERY FINE GRAIN SELECTION

This blend is mainly made up of very fine grain staves from futaie forests (high forests) with the balance comprising very fine grain from TSF en conversion (coppice forest being converted into high forests).

A single top-grain stave is added.

> 3 mm: 1 stave maximum

Fine grain: 10 staves

Very fine grain: 20 staves.

These barrels use the same concept as the 2-Year Fine Grain Selection, but with superior criteria in terms of grain and colour.

### FUTAIE 24 MONTHS Futaie selection

A selection of wood sourced only from forests managed using futaie or haute futaie techniques.

The trees are planted in high density (100,000 seedlings/ hectare) and are progressively selected during their growth to obtain 150 mature trees almost two centuries later.

The high level of competition for light in these forests forces the trees to grow tall, producing extra fine grains with a specific aromatic profile.

### PRESTIGE 24 MONTHS Sandy-clay

This specific blend is composed only of very fine grain wood, coming from our best selection of haute futaie timber forest oaks grown on sandy-clay soils. It is an exclusive selection, with a unique light pink colour and a delicate scent reminiscent of cedar.

# TOASTING

### **PRIME**

Elegant and restrained, the PRIME toast is designed to bring tension and freshness to your wines. Our master coopers use frequent turning and regular watering to carefully control the addition of aromatic notes, and thus delicately stretching the finish.

Recommended for ageing for a minimum of 10-12 months.

### **MPRIME**

Medium heating par excellence, the combination of moderate watering and a higher level of toasting brings structure, volume and density on the palate. This toast has a moderate aromatic profile, to complement the aromatic expression of the wine.

Recommended for ageing for a minimum of 8-10 months.

### M+PRIME

Energy and generosity characterise the M+PRIME toast. Our coopers work with moderate watering throughout the toasting process to achieve a beautiful brown tint. The aromatic profile of M+PRIME has subtle notes of toast and nuttiness. On the palate, this toast brings dynamism and roundness to powerful red wines, without ever supplanting the natural structure of the wine.

#### **GCPRIME**

This generous and textured toast is a wonderful discovery!

The latest addition to the range, GCPRIME is derived from sustained water treatment and a high level of flame. This intense toasting superbly complements the notes of ripe red fruits on delicate grape varieties such as pinot noir, but also brings volume and spicy notes in blending.

Sustainable forest management
Quality & Traceability
Our NT Bois stave mill guarantees:
A provenance of French origin.
Complete traceability from the forest to the barrel.

ISO 9001 and ISO 22000 certifications

Control and homogeneity, the traceability and consistency of our manufacturing process and our quality of service.

Our collaboration with specialist oenological laboratories allows us to carry out tests of our wood, air supplies and water to avoid chemical contamination of our barrels.
